

Retina (Project Eye Book 1)

Bast, a dying planet riddled with radiation, its citizens forced to move their community to its nearby moon, Chandra. This moon has many secrets lying beneath the surface; ones that could destroy its very core, but the biggest secrets lie just above the surface and right under the noses of its unsuspecting inhabitants. It all starts with one such inhabitant, Kale AcRona. Kales journey starts and ends with a secret he has kept from his family at a dire cost. The web of lies he cleverly constructs takes him from the Chandran Treetops, his family home, to the moons darkest of mines with its deadly threats. His biggest threat however, could not be found in those dark mines, but in his own troubled mind and body.
