

Calculating Bra Size: The New Way

It is speculated that 75% of women wear the wrong bra size. The reason for this puzzling statistic is simply that the fit of bras has evolved more quickly than sizing methods could be developed. Old sizing methods, developed for bra cup sizes ranging from Aa to D have proven inaccurate for new bra cup size ranges including breast size up to an R cup. Frustrated with the inconsistencies in the traditional methods of calculating bra size, Bridal and Eveningwear designer Emma Scott developed a new method of determining bra size. Calculating Bra Size is the first presentation of her original and accurate method for calculating bra size and breast size. Consistently wearing an incorrect bra size can lead to a host of problems including visually appearing larger than ones actual size, poorly fitting garments, poor posture, back pain and occasionally cause medical problems requiring surgery.
