

Model Code of Safe Practice in the Petroleum Industry: Guide to Hydrocarbon Loss Accounting and Control in Petroleum Refinery Operations Pt. 17 (Petroleum measurement manual)

This guide summarizes what is currently considered by oil loss representatives from the UK refineries to be good practice in that area of operation. The control of hydrocarbon losses can offer significant cost savings for the operator and assist in reducing environmental impact. The guide is dedicated to the principles and effects of measurement on the loss figures and an understanding of the errors and inaccuracies that are involved. This should in turn lead to a better understanding of loss figures.
