

The 5:2 Diet For Building Muscle and Losing Fat: The Fast, Effective way to Shed Tons of Fat and Build Muscle! (5:2 diet - fat loss - weight loss - dieting ... - body building - fast fat loss - IF)

The 5:2 Diet for Building muscle and Losing Fat FAST! The 5:2 Diet has been one that has helped thousands of people shed unwanted fat, get in shape and feel better! The problem comes when you want to improve your physique whether it be add a bit of muscle for the beach, see that six pack for the first time, or just tone up a little, The 5:2 Diet isnt designed to help you get there. So what do you do then? Enter The 5:2 Diet for Building muscle and Losing Fat FAST! The most common cause of someone not being able to consistently lose weight is craving and the idea that you have to fight it for a long period even for a lifetime. While most diets are only difficult in the beginning, especially during the phase of mild caloric restriction to induce the burning of stored fat, without a strong will power and firm resolve, a dieter could easily be convinced to stop dieting with just a weeks worth of cravings. Often, dieting is associated with hunger most often, psychological ones more than physiological. Those whove experienced following various diets feel that after being subjected to a restrictive (but apparently temporary) lifestyle, they would never want to be in a diet again. Unless otherwise a diet deprives someone while still keeping him satisfied and granting him the ability to give in to his cravings, weight loss will have to be achieved through means other than dieting.

This is why the revolutionary diet called 5:2 (or intermittent fasting) was developed. The primary attribute of this diet is the 2 non-consecutive days of fasting and the five days of normal, unrestricted diet. This form of diet prevents a person from quitting due to hunger and food craving. In fact, before conducting tests about the intermittent fasting, experts believed that people who underwent caloric restriction on the fast day would consume more calories on the feed day. Results, however, show that while subjects eat more than

what they normally do, they only consume 110% of their normal caloric intake rather than, say, 175%. This only proves that 5:2 effectively address the craving aspect of most restrictive diets. Is it possible to eat normally five days a week and become slimmer and healthier as a result? Simple answer: yes. You just limit your caloric intake for two nonconsecutive days each week. You will lose weight quickly and effortlessly while building muscle! Scientific trials have shown that intermittent fasting will help the pounds fly off and reduce your risk of diseases, including diabetes, cardiovascular disease, and even cancer, offering a dietary program you can incorporate into your busy daily life. In this book you will find the specific diet that many have used to get the body that they have always dreamed of! Inside you will find detailed instructions on how to, Gain Muscle.
