

Novell Identity Manager Administrators Handbook

Novell's Identity Manager shares data between systems in an enterprise and delivers swift, secure management, and automates changes to user access rights, passwords, and profiles saving time and money while making corporate environments more secure. Identity Manager has experienced increased growth and is used by major corporations around the world, including the University of Louisville and the New South Wales Department of Education and Training. Novell Identity Manager Administrators Handbook is the authoritative guide to the Novell Identity Manager. It provides information not currently available anywhere, neither in the products documentation nor in any third-party resource. This book is written by Identity Manager engineering team at Novell with access to field consultants providing critical product and customer information. Coverage includes new features like the web-based user environment, meta-directory engine, new platform support, and the eclipse-based GUI environment.
