Powdered Coal as a Fuel (1918): : Cecil F Herington Coal gasification is the process of producing syngasa mixture consisting primarily of carbon monoxide (CO), hydrogen (H₂), carbon dioxide (CO₂), methane (CH₄), and water vapor (H₂O) from coal and water, air and/or oxygen. Historically, coal was gasified using early technology to produce coal gas .. Some utilize pulverized coal as fuel while others work with relatively large **G.M.
