

Invincible Roulette - A Flat Betting Strategy - Double Zero Edition (TeamRoulette Series Book 3)

From The TeamSo how did we go about finding the mechanics of this strategy? It was after lots of study, ideas in the night, and inspiration that we concluded there is no real pattern a mechanical system could follow. We are faced with dealers who spin the wheel fast and slow; and flick the ball hard and soft. We have to deal with the peculiar behavior of random and not so random numbers, the numerical laws of shows and no shows, repeat pattern of singles, doubles, triples etc. We likened roulette to atomic particles and how, when collisions occur, results are spectacular. What we needed was a system that worked like that. Given that the spin result on a roulette wheel appears to be random, we have designed a random betting system to fit in with the random results from the wheel. In practice, we discovered that a lot of times when these collisions (spin result vs. chip on number) occurred, we had a winning result. We have spent much time finding as many of those random number groups as we can and have put them in the best sequence possible. While it doesn't work all the time it works enough to give the player an edge. That's what we all want. We could give you a FREE ROULETTE SYSTEM - like the old - bet on red or black and double your bet if you lose (Martingale) method. But who wants to give all that money to the casino when you reach the house betting limit! Use Invincible roulette, and keep your own cash and some of theirs! We have two versions of Invincible Roulette for live play at single zero tables and one version of Invincible Roulette for live play at double zero tables. All with an enhancement available that will speed up your winnings. Also, as we are down to earth folks, we decided to keep it simple, No fancy stuff here, no special reports, no free stuff, no don't buy this or don't buy that, just good solid info you can read, digest and then get on with!
