

A Different Wavelength Than Me

Wavelength (n): the distance, measured in the direction of propagation of a wave, between two successive points in the wave that are categorized by the same phase of oscillation. Evan: He is the farthest you could swim out; the longest ride and the deepest chasm when it comes to waves. He is lost in a sea of life that is drowning him day in and day out. His only hope had always been her, but it had always been too much to bare in her mind. Harlow: She tries hard to stay out of the water completely. The waves splashes and the length of time she spends coming close to the tides is slim-to-none. She enjoys a life that is void of much emotion; a life of simplicity and no feeling. He is everything she has ever wanted and nothing she could ever truly have. They are being pulled in deeper, and they are swimming a long haul back to shore, but will they make it through together when they are on such different wavelengths?
