

Third Generation Photovoltaics: Advanced Solar Energy Conversion (Springer Series in Photonics)

Photovoltaics, the direct conversion of sunlight to electricity, is now the fastest growing technology for electricity generation. Present first generation products use the same silicon wafers as in microelectronics. Second generation thin-films, now entering the market, have the potential to greatly improve the economics by eliminating material costs. Martin Green, one of the worlds foremost photovoltaic researchers, argues in this book that second generation photovoltaics will eventually reach its own material cost constraints, engendering a third generation of high performance thin-films. The book explores, self-consistently, the energy conversion potential of advanced approaches for improving photovoltaic performance and outlines possible implementation paths.

Third Generation Photovoltaics - Advanced Solar Energy - Springer Photovoltaics, the direct conversion of sunlight to electricity, is now the fastest growing Springer Series in Photonics Advanced Solar Energy Conversion. **Third Generation Photovoltaics: Advanced Solar Energy Conversion** Next Generation Photovoltaics and Its Applications Yoshihiro Hamakawa H.
