

Wind Energy Systems for Electric Power Generation (Green Energy and Technology)

Among renewable sources wind power systems have developed to prominent suppliers of electrical energy. Since the 1980s they have seen an exponential increase, both in unit power ratings and overall capacity. While most of the systems are found on dry land, preferably in coastal regions, off-shore wind parks are expected to add significantly to wind energy conversion in the future. The theory of modern wind turbines has not been established before the 20th century. Currently wind turbines with three blades and horizontal shaft prevail. The driven electric generators are of the asynchronous synchronous type, with or without interposed gearbox. Modern systems are designed for variable speed operation which make power electronic devices play an important part in wind energy conversion. Manufacturing has reached the state of a high-tech industry. Countries prominent for the amount of installed wind turbine systems feeding into the grid are in Europe Denmark, Germany and Spain. Outside Europe it is the United States of America and India who stand out with large rates of increase. The market and the degree of contribution to the energy consumption in a country has been strongly influenced by National support schemes, such as guaranteed feed-in tariffs or tax credits. Due to the personal background of the author, the view is mainly directed on Europe, and many examples are taken from the German scene. However, the situation in other continents, especially North America and Asia is also considered.

Advantages and Challenges of Wind Energy Department of Energy Small wind electric systems are one of the most cost-effective home-based renewable energy systems -- with zero emissions and pollution. Wind turbines convert the kinetic energy in wind into clean electricity. For instance, to raise a 10-kilowatt generator from a 60-foot tower height to a 100-foot tower involves a 10% **Wind Energy Foundation Wind Power Your Home** Springer Series in Green Energy and Technology ISSN 1865-3529.
